New assets
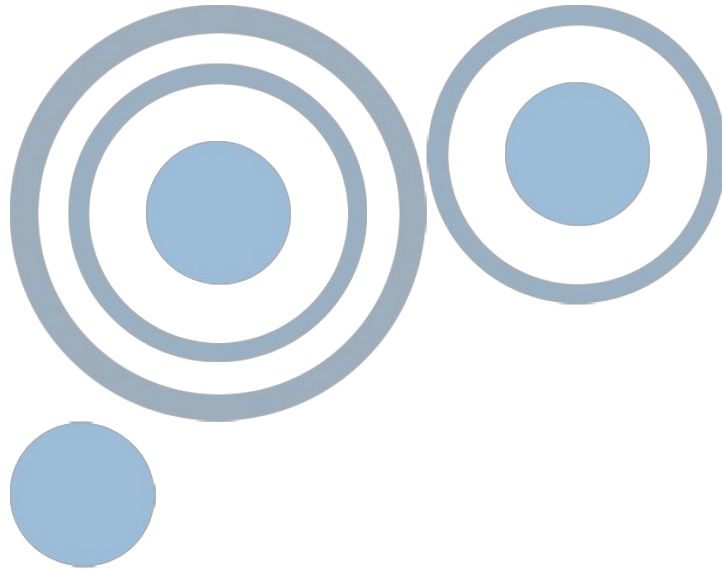

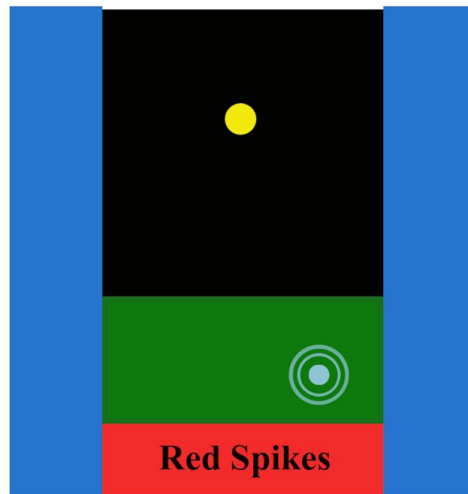

Sort of a cursor. Each time you touch the screen the middle dot will apear then the next ring, then the outer ring. A little animation of the middle dot waving outward. Animation is 3 pngs. Middle dot alone, Middle with the inner ring, Middle with the inner ring and outer ring. Will apear where ever you tapped but only in the green area. This animation represents the force that pushes the shape.

Green zone will be at the bottom quater of the screen just above the spikes, you can only tap the shape when it comes into the green zone. Otherwise you could tap it into a corner of the screen at the top and just keep it there. So this will make timing a must.

Example of all of them together

Background i will work on, maybe some kind of particle generator. Make it more interesting.
